

SHOW STOPPER

Notes to the Future

The “show stopper” exhibit was the most fun of any exhibit available. The entire setup was relatively simple as Mr. Baird supplied us with the majority of the materials. However, we had to make the discs spin quietly and smoothly on the rotating machine in order for the entire exhibit to function properly. Our secret is that we inserted the two washers in front of the disc and then to seal it, we installed top screw. This method my partner and I created proved effective time and time again, and in the future, it will do the same. With this technique, the rotating machine will operate smoothly and silently with little effort. As for future students, I highly recommend this exhibit for I had the most fun I have had in a long time with science because of this experiment. I would also like to thank Mr. Baird because this exhibit would not be possible without his supplies.
