Squirming Palm

Congratulations! You have chosen Squirming Palm. What you will need to do is to be able to explain what the squirming palm is, what does it do, and why does it do it. When you are presenting this, make sure to rotate your disk slowly at 1 or 2 seconds per revolution and have the viewers stare at it for about 20 seconds, then they will stare at their palm. Have the viewers focused on the disk and nowhere else before they stare at their palm or else it will ruin the waterfall effect in their eyes. This project will be a blast to do and the parents and children's will have a great time. Well, have fun with this and good luck!
