

Physics Course Troubleshooting

A student seems to be underperforming in Physics. What's going wrong and what can be done? Proceed . . .

A student who can honestly answer “yes” to these questions is performing at their full potential in physics: they are not underperforming at all. Whatever their grade in the class is, that is the very best they can do. And that’s all we can ask of them. For some students, that grade may not be an “A”.

Virtually all students who are underperforming are not meeting expectations at one or more of the elements described above. The instructor is available at lunch and after school as indicated in class for additional help.
