

## Phyz guide to the future

Allow extra time to order the prism

Make sure to have extra supplies such as a full roll of duct tape, construction paper, and scissors

Use a soft ball that will not hurt if it hits anyone

Perform exhibit outside against wall if weather is descent

Make sure hoop is sturdy and will not brake during the day

Adjust hoop height to a smaller kid's height, and not your own height

If exhibit gets really congested lessen the amount of shots per kid, to speed process

Do not let any of the kids drop the goggles

Try to keep track of what kids have gone, and what kids are trying to go again so whoever hasn't gone yet gets a chance to try

If exhibit gets out of hand remember that you are in control and calm the kids down before showing your exhibit
